DETAILED ACTION

Drawings

1. The drawings were received on 7/5/2005. These drawings are acceptable.

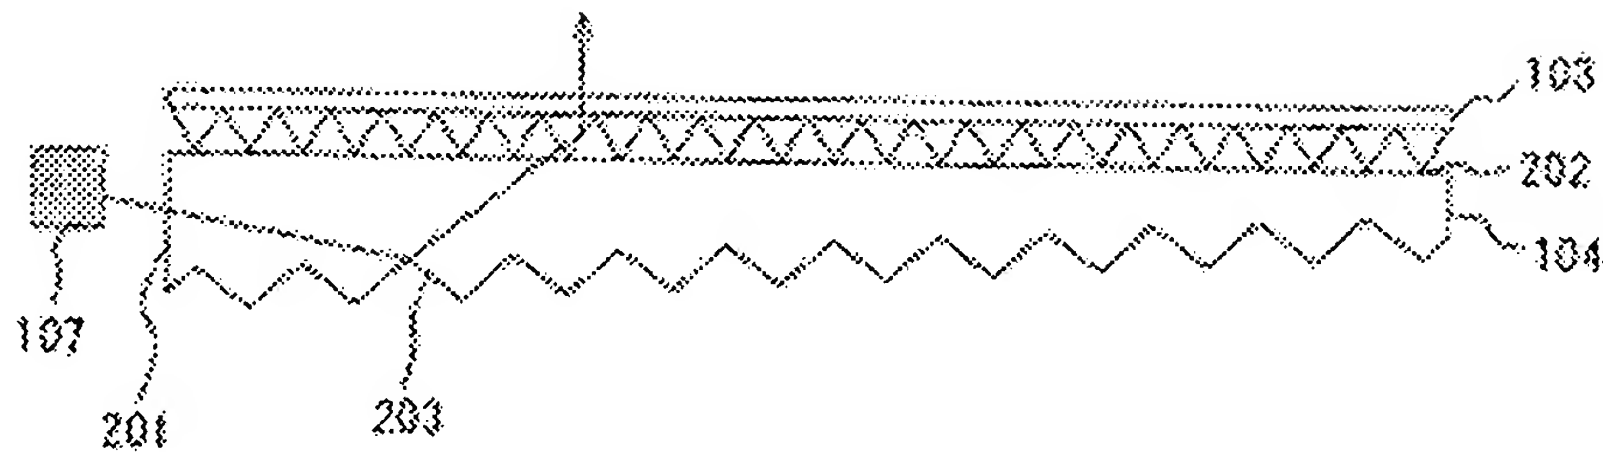

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance:

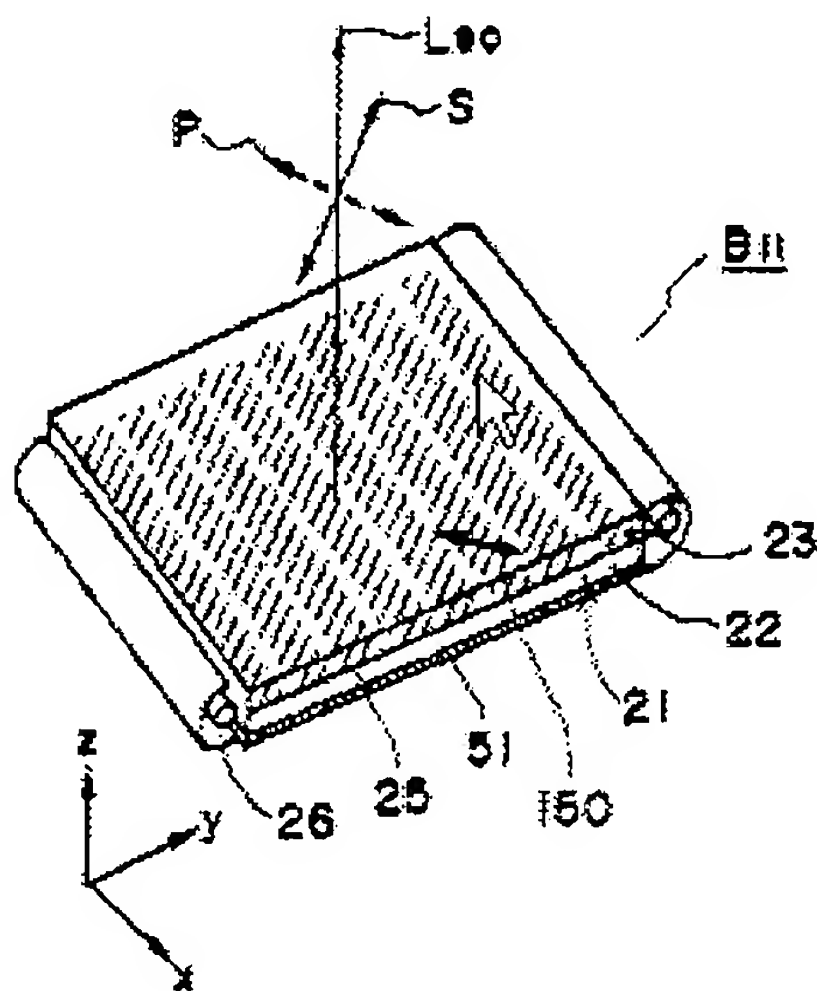

Claim 1 recites a planar light source unit comprising a light source, prism sheet, a light guide plate having a light incident surface, a light exit surface, and an anisotropic diffraction grating formed on the light exit surface or a surface opposite to the light exit surface for diffusing light in a principal diffusing direction along the light incident surface, wherein the anisotropic diffraction grating does not substantially diffuse light in a direction perpendicular to the principal diffusion direction.

Claim 10 recites a display device comprising a display panel, a planar light source unit having a light source a light guide a prism sheet where the light guide plate having a light incident surface, a light exit surface, and an anisotropic diffraction grating formed on the light exit surface or a surface opposite to the light exit surface for diffusing light in a principal diffusing direction along the light incident surface, wherein the anisotropic diffraction grating does not substantially diffuse light in a direction perpendicular to the principal diffusion direction.

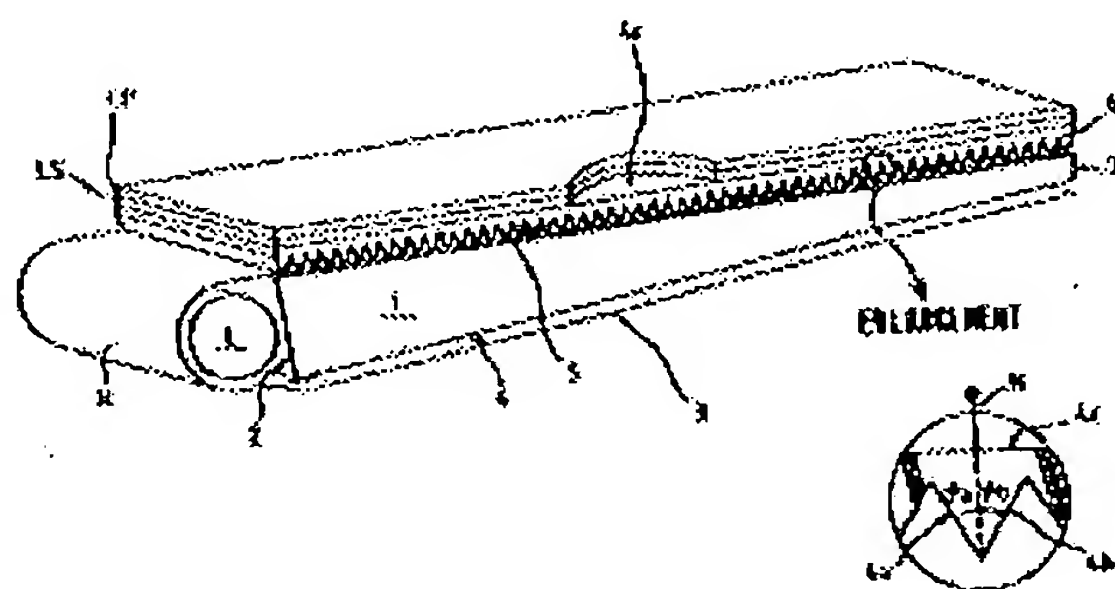

Art Unit: 2875

Hoshi (USPN 6,020,944) teaches a light transmissive light guide member, and a light source disposed on a side of the light guide member to emit light to the light guide member, wherein the light guide member includes an anisotropic grating (25).

Ohkawa (USPN 6,746,130) teaches a prism sheet and structures having a specific detailed range of the apex angle (Figure 3; column 3, lines 15-18) of 66 degrees.

Because none of the references disclosed the combination of a prism sheet structures having an apex angle of larger than 65 degrees and smaller than 68 degrees with the light guide having an anisotropic diffraction grating formed on the light exit surface or a surface opposite to the light exit surface for diffusing light in a principal diffusing direction along the light incident surface, wherein the anisotropic diffraction grating does not substantially diffuse light in a direction perpendicular to the principal diffusion direction, nor is there any motivation to combine them, the claims are deemed patentable over the prior art of record. Claims 1-4, & 6-17 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Amendment

3. Examiner acknowledges that the applicant has amended 1 & 10, claim 5 has been canceled without prejudice or disclaimer, and claims 11-17 have been added.

Response to Arguments

4. Applicant's arguments, see pages 9-10, filed, with respect to 7/5/2005 have been fully considered and are persuasive. The drawing objection, 35 U.S.C. 112 rejection, and 35 U.S.C. 103 rejections of 4/21/2005 has been withdrawn.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacob Y. Choi whose telephone number is (571) 272-2367. The examiner can normally be reached on Monday-Friday (10:00-7:00).
